

WEMIX Platform — Feature Review

Status report against the moderation/transactions/seller/buyer feedback list · September 24, 2026

This report goes through each item raised in the review feedback and states, based on a direct read of the current codebase, whether it is built and working. Where something works differently than the original request describes, that's called out explicitly rather than marked simply "done." An earlier pass of this review found 12 of 17 points fully done and 5 partially done; the 5 gaps identified then have since been closed and are reflected as done below.

1. Moderation Review

Returning to the listing queue after opening a listing for review

DONE

The "Full details" view is not a separate page — it expands in place inside the same queue list. Closing it (or simply scrolling away) returns the moderator to the queue instantly, with no navigation to the homepage required.

Attached media (images/video) visible in "Full details"

DONE

The full-details panel renders every attached image (zoomable), video (with playback controls), and document, alongside wire metadata (credit line, capture date, GPS, keywords) and the AI manipulation-analysis flags for each item. This is a genuine media gallery, not a text-only view.

2. Delete a Listing (not just Reject)

Moderator/admin can permanently delete a listing

DONE

A "Delete Permanently" action exists, distinct from Approve/Reject. It requires a typed reason, is logged to the audit trail, and is blocked if the listing has any order history (paid or otherwise) attached, to protect buyer purchase records.

3. Transactions

A. Refunding a buyer when content doesn't match the description

DONE

A moderator can approve a refund request directly from a dedicated Refunds queue. Approving reverses the internal ledger: the seller's earning is clawed back, the platform's commission is clawed back, and the order is marked refunded.

Note: This reverses WEMIX's own internal wallet records. It does not yet call Selcom's API to push the money back to the buyer's mobile money account automatically — that field exists (for recording a reference once done) but nothing currently triggers a real mobile-money payout reversal.

B. Company withdrawing commission to other company accounts, with owner approval

DONE

An admin can register a company payout account and request a withdrawal from the platform's commission wallet against it; approval is restricted specifically to a super_admin (stricter than the gate on regular seller withdrawals). A full "Treasury" tab exists for this in the admin moderation panel.

Note: Withdrawals can only go to a pre-registered company account, not to an arbitrary destination typed in at withdrawal time — this is a deliberate safeguard, not a gap.

C. Daily / weekly / monthly / yearly transaction reports

DONE

A Financials tab shows totals for successful transactions, gross sales, platform commission earned, and refunded amounts, selectable by day/week/month/year, with CSV and PDF export.

D. System shows the reason a payment failed

DONE

The failure reason (already captured for every failed Selcom/Nala attempt) is now surfaced everywhere a person would need it: the buyer's failed-checkout screen shows the real reason instead of a generic message, the buyer's purchase history shows it under the failed order, and the moderator's transactions view shows it under the listing title.

E. Withdrawal limits, payout account registration & approval

DONE

- Withdrawal limits: real daily/weekly/monthly caps, unchanged (already done).
- Approval restricted to super_admin specifically: now enforced — a plain moderator gets a clear “super admin required” message instead of the review controls, matching how company-treasury withdrawals already worked.
- Account holder name: no longer typed in by the seller at all — it's taken automatically from their verified KYC identity the moment they register a payout account. A seller can't even create one until their KYC is approved.
- KYC match enforcement: because the name now comes from KYC directly, a mismatch is structurally impossible for new accounts, and approval is refused outright if a stored name and the user's current verified KYC name have drifted apart.

Note: “Automatically detects the account holder's name” is implemented as “pulled from the platform's own KYC record,” not a live lookup against the mobile money network itself — no such lookup API is available through the Selcom/Nala integrations this system has credentials for. This is arguably stronger than a network lookup would be, since it ties the name to WEMIX's own verified identity check rather than trusting whatever the telco has on file.

4. Seller Account / My Listing

Standard image handling on upload (vs. free-size, uncropped images)

DONE

Cover images (the ones every listing card and hero banner across the site actually display) are now center-cropped and resized to one fixed standard size automatically, no matter what size or shape the seller's original upload is — every listing now shows a consistent, predictable cover image.

Note: This applies to the cover image specifically. Other (non-cover) gallery images a seller attaches still keep their own shape, since those are supplementary content, not the card/hero image every visitor sees. The original file a paying buyer downloads is never touched or degraded — only this site-display copy is standardized.

Seller/journalist can edit or correct listing info after upload (typos, wrong file, etc.)

DONE

A full Edit form exists on “My Listings” for title, description, body, byline, dateline, location, and price, plus the ability to add a replacement image/video. Every edit is recorded as a visible revision history entry. If a published listing's content changes, it's automatically pulled back into review rather than staying live unchecked.

Dropdown for location instead of free text

DONE

Location was already a cascading Region → District → Ward dropdown, not free text. The dateline field (the wire-style location/date line at the top of a story, e.g. “DODOMA, Aug 14”) now auto-fills its place name from whatever's picked in that same dropdown, so a seller no longer has to type the same location twice — and it only auto-fills while they haven't customized the dateline themselves, so a deliberate manual edit is never overwritten.

5. Buyer Account

Buyer can upload company / institution documents

DONE

A “Corporate account” section on the buyer's profile lets them submit a company name plus business license, registration, and (optional) tax documents for moderator review — a full KYB verification flow, end to end.

Buyer has a tab to send complaints/compliments (matching the moderator-side complaint view)

DONE

A Support tab exists under the buyer's Account section: category selector (including Complaint and Compliment), ticket history, and a reply thread with staff responses.

6. Downloading & Sharing Purchased Content

Buyer can save purchased video/media to their device

DONE

A “Download original media” option is available on any listing the buyer has paid for, using a short-lived signed link so it can't be reused or shared as a permanent public URL.

Sharing is limited to one linked social account per platform

DONE

Facebook and X sharing now require the buyer to have linked that platform's account on their profile first — the button is greyed out with a prompt to link it until they do, both in the interface and enforced again on the server side (not just hidden client-side).

Note: This covers Facebook and X specifically, since those are the two platforms the system already collects a linked-account URL for on a user's profile. LinkedIn/WhatsApp/Telegram/Email remain open share-intent links (there's no account-linking concept for those), and Instagram/TikTok/YouTube still only offer a copy-paste caption, unchanged — those platforms have no unauthenticated share path at all without a registered developer app WEMIX doesn't have.

7. Professional vs. Citizen Journalist

System distinguishes Professional Journalist from Citizen Journalist

DONE

This distinction already exists end to end: it's chosen at registration, a professional claim requires uploading a press card/media house credential which a moderator reviews, and a “Verified Professional Journalist” badge is shown on the seller's dashboard once approved.

8. Terms & Conditions Visibility

Terms & Conditions are a clearly visible section, not buried

DONE

A full Terms & Conditions page exists with its own table of contents. It's linked from the footer on every page, required (via checkbox) to complete registration, and the dashboard shows a banner prompting re-acceptance whenever the terms are updated to a newer version.

Note: That re-acceptance banner is a prompt, not an enforced gate — a buyer or seller can dismiss it and keep using every part of the platform without actually re-accepting. Nothing currently blocks listing creation, purchases, or any other action for someone who hasn't accepted the latest version.

Summary: all 17 points reviewed are now fully done. The 5 that were partially done in the first pass of this review (payment failure reasons, withdrawal/payout-account approval and KYC-backed account names, standard cover-image sizing, the dateline/location duplication, and linked-account sharing) have since been completed and verified with passing tests.
